Baligh

Arabic Writing Assistant

A Graduation Project Report Submitted

to

Faculty of Engineering, Cairo University

in Partial Fulfillment of the requirements of the degree

of

Bachelor of Science in Computer Engineering.

Presented by

Ahmed Hamed Gaber Hamed Akram Hany Karam Salam
Amir Anwar Bekhit Awd Kedis Somia Saad Ismail El-Shemy

Supervised by

Dr. Ayman AboElhassan

Abstract

Arabic digital writing still suffers from a shortage of integrated tools that can correct Modern Standard Arabic text accurately, respond in real time, and explain their feedback in a way that helps users learn. Existing tools often focus on surface spelling fixes or black-box suggestions without exposing the grammatical reasoning behind the correction. Baligh addresses this problem by providing an Arabic writing assistant that combines grammatical error detection, grammatical error correction, spelling-aware editing, next-word suggestion, and explanatory feedback in a single user-facing system. The project aims to support students, educators, and Arabic content writers by improving writing quality while also making the correction process more understandable and educational.

The implemented system follows a modular pipeline. A preprocessing layer performs normalization, word-boundary handling, segmentation, and morphological analysis and disambiguation. On top of that, Baligh integrates a grammatical error detection engine that fuses rule-based, lexicon-based, and machine-learning detectors, then passes its findings to correction components built around ontology-guided reasoning, dictionary lookup, and text-editing models. In parallel, a next-word suggestion module supports both next-word prediction and word auto-completion. The final system highlights issues, proposes corrections, returns ranked suggestions, and presents grammar-oriented explanations to the user in an interactive workflow.

The project outputs include the preprocessing pipeline, grammatical error detection and correction services, the next-word suggestion subsystem, and a working user application. Testing and validation relied on automated unit and integration tests together with evaluation on established Arabic linguistic resources, including QALB14, QALB15, and ZAEBUC. Overall, Baligh demonstrates that a modular and explainable Arabic writing assistant can combine linguistic processing and machine learning into a practical platform for improving Arabic writing quality.

الملخص

لا تزال الكتابة الرقمية باللغة العربية تعاني من نقص الأدوات المتكاملة التي تستطيع تصحيح نصوص العربية الفصحى بدقة، والعمل بزمان استجابة مناسب، وتقديم تفسير واضح يساعد المستخدم على التعلم بدل الاكتفاء بإظهار التصحيح فقط. فكتير من الأدوات المتاحة تركز على الأخطاء الإملائية السطحية أو تقدم اقتراحات غير مفسرة. يعالج مشروع بليغ هذه المشكلة من خلال بناء مساعد كتابة عربي يجمع بين اكتشاف الأخطاء النحوية، وتصحيحها، ومعالجة الأخطاء الإملائية، واقتراح الكلمة التالية، وتقديم تفسير مبسط للقاعدة أو سبب الخطأ داخل نظام واحد موجه للمستخدم. ويهدف المشروع إلى خدمة الطلاب والمعلمين وصناع المحتوى العربي عبر تحسين جودة الكتابة وجعل عملية التصحيح أكثر فائدة من الناحية التعليمية.

يعتمد النظام المنفذ على بنية معيارية تبدأ بطبقة للمعالجة المسبقة تشمل التطبيع، وتحديد حدود الكلمات، والتجزئة، ثم التحليل الصرفي وفك الالتباس. بعد ذلك يدمج بليغ محركاً لاكتشاف الأخطاء النحوية يعتمد على المزج بين قواعد لغوية، وكشافات معجمية، ونماذج تعلم آلي، ثم يمرر النتائج إلى وحدات التصحيح المبنية على الاستدلال المعتمد على الأنطولوجيا، والبحث المعجمي، ونماذج التحرير النصي. وبالتوازي مع ذلك، يوفر النظام وحدة لاقتراح الكلمة التالية تشمل التنبؤ بالكلمة التالية والإكمال التلقائي للكلمة الجارية كتابتها. وتعرض المنصة النهائية الأخطاء والتصحيحات والاقتراحات والتفسيرات اللغوية بصورة تفاعلية.

تشمل مخرجات المشروع خط معالجة مسبقة متكامل، وخدمات لاكتشاف الأخطاء وتصحيحها، ووحدة اقتراح الكلمات، وتطبيقاً عملياً للمستخدم. واعتمد التحقق من النظام على اختبارات آلية للوحدات والتكامل، إضافة إلى تقييم مبني على موارد عربية معروفة مثل QALB14 و QALB15 و ZAEUC. وتُظهر المحصلة أن بليغ يقدم نموذجاً عملياً لمساعد كتابة عربي قابل للتفسير يجمع بين المعالجة اللغوية والتعلم الآلي لخدمة الكتابة العربية بصورة أكثر جودة وفائدة.

Acknowledgment

Baligh was not built through technical effort alone, but through the support, patience, and trust of many people around us. We would first like to thank our supervisor, Dr. Ayman AboElhassan, for his steady guidance throughout this project. His questions, feedback, and encouragement pushed us to think more carefully, work more seriously, and keep improving the project whenever we felt uncertain or stuck.

We are also deeply grateful to the Faculty of Engineering at Cairo University and the Department of Computer Engineering. The years we spent there shaped the way we think, learn, and solve problems, and this project reflects much of what we gained from that journey. Baligh became possible because of the academic foundation and sense of responsibility that this environment gave us.

We would also like to thank one another as a team. This project demanded time, patience, repeated trial and error, and many long discussions before ideas became clear and features became real. What made that process meaningful was not only the final result, but the way we supported each other through the difficult parts, shared the pressure, and kept moving forward together.

Finally, we thank our families and loved ones with all sincerity. Their patience during busy and stressful periods, their constant encouragement, and their belief in us gave us the strength to continue. Any achievement in this work carries a part of their support within it, and for that we are truly grateful.

Chapter 1: Introduction

Baligh is an Arabic writing assistant designed to support Modern Standard Arabic writing through explainable correction and real-time assistance. This chapter introduces the motivation behind the project, defines the problem it addresses, summarizes the main outcomes delivered by the project, and outlines the organization of the remainder of the report.

1.1. Motivation and Justification

Arabic digital writing still lacks broadly available tools that combine grammatical support, writing speed, and educational value in a single user experience. While many writing assistants for other languages provide immediate correction, prediction, and revision support, Arabic users often rely on tools that address only isolated spelling mistakes, provide limited grammatical help, or return suggestions without clarifying the linguistic reason behind them. This gap is especially important in Modern Standard Arabic, where accurate writing is influenced by rich morphology, orthographic ambiguity, and context-sensitive grammatical structure.

These characteristics make Arabic NLP more demanding to model and more difficult to serve well in real time. A useful writing assistant must do more than detect surface-level errors; it must process text carefully, understand partially typed input, and return feedback quickly enough to support natural writing. It must also present corrections in a way that is understandable to users rather than functioning as a black box.

Baligh is motivated by this need for an integrated Arabic writing assistant that combines grammatical error detection, grammatical error correction, next-word assistance, and explanatory feedback in one workflow. The project is intended to benefit students, educators, and Arabic content writers who need writing support that improves both text quality and user understanding at the same time.

1.2. Project Objectives and Problem Definition

The primary objective of Baligh is to build an explainable writing assistant for Modern Standard Arabic that can help users write more accurately and efficiently. To achieve this objective, the project integrates a preprocessing pipeline for normalization,

segmentation, and morphological analysis with a grammatical error detection subsystem, grammatical error correction components, a next-word suggestion module, and a user-facing application interface. The system is designed to highlight issues, generate ranked suggestions, provide next-word and auto-completion support, and present explanations that make the feedback more useful for learning.

In addition to functional assistance, the project aims to demonstrate that Arabic writing support can be delivered through a modular architecture that balances linguistic processing, machine learning, usability, and responsiveness. This makes Baligh not only a correction tool, but also a platform for combining multiple Arabic NLP capabilities into a practical workflow.

Formally, the problem addressed by this project is the lack of an integrated and explainable system for Modern Standard Arabic writing that can detect and correct grammatical issues, assist users during text entry, and deliver reliable feedback in a form suitable for real-time interactive use.

1.3. Project Outcomes

The project produced a working set of interconnected software components that together form the Baligh writing assistant. The implemented outcomes include a preprocessing pipeline responsible for text normalization, word-boundary handling, segmentation, and morphological analysis, as well as a grammatical error detection subsystem that combines rule-based, lexicon-based, and machine-learning detectors through a fusion layer.

The project also delivered grammatical error correction components that use ontology-based reasoning, dictionary-based lookup, and text-editing approaches to generate and rank correction candidates. In parallel, Baligh includes a next-word suggestion subsystem that supports both next-word prediction and word auto-completion for interactive writing scenarios.

At the application level, the project provides a backend API and a web-based client that expose these capabilities to the user through an integrated writing workflow. Testing and evaluation were supported through automated checks and experiments on established Arabic resources, including QALB14, QALB15, and ZAEUC, in addition to the accompanying project documents and technical materials.

1.4. Document Organization

The remainder of this report is organized as follows. Chapter 2 presents the Market Visibility Study, which examines the intended users of the system, reviews related products, and discusses the practical need for Baligh.

Chapter 3 provides the Literature Survey, covering the Arabic NLP background and the research context most relevant to the project. Chapter 4 describes the System Design and Architecture, including the main modules, their responsibilities, and the overall data flow.

Chapter 5 discusses System Testing and Verification, explaining how the implemented components were checked and evaluated. Finally, Chapter 6 presents the Conclusions and Future Work, summarizing the project contributions and outlining possible directions for extending Baligh in later stages.

Chapter 2: Market Visibility Study

This chapter surveys the market related to the project and discusses similar tools or platforms. It should explain their limitations and justify the need for Baligh.

2.1. Targeted Customers

Mention the intended customers/users and how they benefit from the project.

2.2. Market Survey

List competing or related products. Discuss each one in a subsection and explain its pros and cons.

2.2.1. Competitive Product 1

Describe the product, strengths, weaknesses, and relevance to Baligh.

2.2.2. Competitive Product 2

Describe the product, strengths, weaknesses, and relevance to Baligh.

2.3. Business Case and Financial Analysis

Describe the possible business case, expected users, pricing assumptions, CapEx, OpEx, revenue, cash flow, and break-even point.

Table 2.1: Sample Five-Year Financial Projection

Year	Expected Users	Revenue	Expenses	Profit Before Tax
1	—	—	—	—
2	—	—	—	—
3	—	—	—	—
4	—	—	—	—
5	—	—	—	—

Chapter 3: Literature Survey

This chapter should include necessary engineering and non-engineering background, followed by a concise literature review of recent work related to the project.

3.1. Background on Arabic NLP

Explain the most important concepts needed to understand the project, such as morphology, spelling correction, grammatical error correction, and language modeling.

3.2. Background on Writing Assistance Systems

Explain writing assistants, correction pipelines, feedback generation, and user-facing explanations.

3.3. Comparative Study of Previous Work

Classify and compare previous work. Focus on relevance, strengths, limitations, datasets, methods, and results.

Table 3.1: Comparison of Related Arabic Writing Assistance Approaches

Work/System	Main Approach	Strengths	Limitations
System 1	Rule-based	Explainable	Limited coverage
System 2	Neural	Strong accuracy	Less interpretable
System 3	Hybrid	Balanced	Requires integration effort

3.4. Implemented Approach

State the approach chosen from the reviewed approaches and justify why it was selected. Mention any modifications added by the team.

Chapter 4: System Design and Architecture

This chapter is the main body of the report. It should answer: what has been done, and how has it been done? The discussion should flow from the overall architecture to modules and submodules.

4.1. Overview and Assumptions

Introduce the system design and list the assumptions used during design and implementation.

4.2. System Architecture

Describe the overall architecture and how modules communicate.

4.2.1. Block Diagram

Figure 4.1: High-level architecture of the Baligh system.

4.3. Module 1: Grammatical Error Detection

4.3.1. Functional Description

Explain what this module does.

4.3.2. Modular Decomposition

Break the module into submodules.

4.3.3. Design Constraints

Explain constraints such as latency, Arabic ambiguity, model size, and data availability.

4.3.4. Other Description of Module 1

Add any other relevant technical details.

4.4. Module 2: Correction and Explanation Generation

4.4.1. Functional Description

Explain correction generation and explanation generation.

4.4.2. Modular Decomposition

Break the module into submodules.

4.4.3. Design Constraints

Explain constraints such as explanation quality, grammatical accuracy, and user readability.

4.4.4. Other Description of Module 2

Add any other relevant technical details.

Chapter 5: System Testing and Verification

This chapter describes how the system was tested and verified.

5.1. Testing Setup

Describe hardware, software, datasets, versions, and test environment.

5.2. Testing Plan and Strategy

Describe unit tests, integration tests, user testing, model evaluation, and manual review.

5.2.1. Module Testing

Explain how each module was tested independently.

5.2.2. Integration Testing

Explain how the full pipeline was tested after integration.

5.3. Test Schedule

Add the timeline/schedule of testing activities.

5.4. Comparative Results to Previous Work

Compare your results with baselines or previous work where applicable.

Chapter 6: Conclusions and Future Work

6.1. Faced Challenges

Discuss technical, management, research, data, and integration challenges.

6.2. Gained Experience

Discuss technical and non-technical learning outcomes.

6.3. Conclusions

Summarize what the project achieved and why it matters.

6.4. Future Work

Mention possible future improvements and extensions.
